Aldol Condensation 2 March 2017

Delaney Griffin Ron Hickman Abstract:

This experiment used Aldol Condensation, more specifically, double Claisen-Schmidt condensation in order to synthesize dibenzalacetone from benzaldehyde and acetone. In part one of the experiment, an aldol reaction occurred. In part two of the

experiment, the product was recrystallized.

One of the key reactions used, the aldol condensation, features the reaction of two carbonyl compounds to form a new α -hydroxy carbonyl compound.¹ This reaction can be performed under acid- or base-catalyzed conditions, and usually

Acces PDF Aldol Condensation Lab Report

results in the formation of an α,β -unsaturated carbonyl compound.

~~The Aldol Condensation – Magritek~~

Aldol condensation (Claisen-Schmidt reaction) definitely is a process which join two carbonyl groups with a loss of water molecule in order to form α,β -
