Articulated motion and deformable objects (AMDO) is a challenging research area which focuses on the automatic analysis of complex objects, such as the human body, exhibiting high variabilities both in terms of spatial and temporal dimensions.

*Articulated Motion and Deformable Objects*

This guest editorial introduces the twenty two papers accepted for this Special Issue on Articulated Motion and Deformable Objects (AMDO). They are grouped into four main categories within the field of AMDO: human motion analysis (action/gesture), human pose estimation, deformable shape segmentation, and face analysis.

*Articulated motion and deformable objects - ScienceDirect*  
Pattern Recognition methods play a key role in modeling and understanding articulated and deformable objects and their behaviour. Deformable Models, Graphical Models, or Spatio-Temporal deep learning architectures are just a few examples. However, current Pattern Recognition methods have to deal with many challenges in order to recognize articulated motion and deformable objects.

Notes In Computer Science  
Articulated motion and deformable objects (AMDO) research focuses on the automatic analysis of complex objects, such as the human body. The subject is important to different fields, including pattern recognition, computer vision, computer graphics, multimedia applications, and multimodal interfaces.
