The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

This Prius repair manual contains the essential information and know-how you need to take the mystery out of servicing the Toyota Prius with Hybrid Synergy Drive®. You ll find step-by-step directions from safely disabling the high voltage system to real-world practical repair and maintenance procedures and full-color technical training. Model and engine coverage: 2004 - 2008 Prius NHW20 and 1N2-FXE Engines.

Over one million Americans are employed in manufacturing motor vehicles, equipment and parts. But the industry has changed dramatically since the U.S. "Big Three" motor vehicle corporations (General Motors, Ford and Chrysler) produced the overwhelming majority of cars and light trucks sold in the United States, and directly employed many people themselves. By 2003, most passenger cars sold in the U.S. market were either imported or manufactured by foreign-based producers at new North American plants (so-called "transplant" facilities). The Big Three now dominate only in light trucks, and are also now being challenged there by the foreign brands. The Big Three have shed about 600,000 U.S. jobs since 1980, while about one-quarter of Americans employed in automotive manufacturing (nearly 300,000) work for the foreign-owned companies. It is clear that the U.S. automotive industry has undergone many drastic changes that have had a net adverse effect on American interests. This book examines the causes of these changes. Congressional acts, increasingly stringent emission laws, the effects of NAFTA, labour unions and globalisation are all within the scope of this book.

Inhaltsangabe:Abstract: This Master thesis explores the organisational change, as performed by Toyota after World War II which, within decades, made this company the most successful automobile producer in the world and a model of corporate governance. Since the Toyota Production System (TPS) was born and continuously developed, it gave such a boost of productivity to the Japanese automobile industry that soon it was copied all over the world. The details of this system, which is to a huge amount based on practical experience and which requires a huge amount of preparatory work, are sufficiently known within the industry. Nevertheless, other Japanese companies and, in particular, international companies fail to catch up with Toyota. The question is, why? Quite a number of car manufacturers already produce according to lean principles, as the TPS instruments are sometimes called, quite successfully, as it seems, and nevertheless they lag behind the performance of Toyota. A highly saturated North American and European automobile market requires thorough change, since companies, due to an increasing global competition, need to undergo some kind of change to survive in the market. Experts assume further consolidation among Original Equipment Manufacturers (OEM) until 2010. Although everything seems to be known about TPS, there is obviously a remainder, because otherwise there would be more Toyotas than just one. There must be something in TPS that has not been identified or has been left out so far by the majority of OEMs all over the world. (Judging from the current competition in the automotive industry, it is more likely that this something has been unintentionally ignored). This is the case although the whole system, without any restrictions, is made accessible to competitors and anyone interested in TPS. Obviously, the knowledge of this mostly missing aspect or link in TPS is restricted, because in the current situation in the automotive industry no company can afford giving away any chances. This master thesis aims at identifying and preparing the above mentioned, apparently hidden or unintentionally ignored, aspects of the Toyota Production System (TPS) which make Toyota more successful than other car makers. Problem definition: Although everything seems to be known about TPS, there is obviously a remainder, because otherwise there would be more Toyotas than just one. There must be something in TPS that has not been identified or has [...]
