Dentistry Clinical In

There are two local anesthetic agents used in dentistry that reportedly induce

methemoglobinemia.

The first agent is the topical local anesthetic benzocaine and the second agent is the injectable (and topical) local anesthetic prilocaine. The mechanism of action is

that both of these  
anesthetics oxidize  
hemoglobin to  
methemoglobin.

## Local Anesthetics for Dentistry | Pocket Dentistry

Local anesthesia is a numbing medication that makes a small area of your body insensitive to pain. It comes in

# Access Free Local

handy for minor In  
surgeries and while  
stitching up wounds.

Local Anesthesia in  
dentistry is common and  
various dentists use it for  
many procedures on a  
daily basis. Lignocaine  
or Lidocaine is the most  
commonly used Local  
anesthetic agent.
