The first is a Pin and Ball Valve engine that runs on compressed air. It is based on model air craft engines that used CO2 cartridges for power. Being powered by compressed air there is more power available for less than perfect machining. It seems like a great first machine shop project, quick, easy, no special materials or tools. Free Plans are available at http://www.floridaame.org/Plans/Modular_1%20Plans.PDF. Please review then or better yet consider building one.

The Penny Engine is a Wobbler engine that runs on compressed air. This type of engine is called a wobbler because there is no connecting rod or wristpin- the entire cylinder and piston pivot as the crank spins, and as it pivots side to side compressed air (or steam or compressed CO2) is ported in at the right time to push the piston down.
