Throughout history man has been discovering fossil bones. Our interpretations of these discoveries through the centuries provides an insight into the development of scientific knowledge. This book traces the history of vertebrate palaeontology from the discoveries and interpretations of fossil bones by the Greeks and Romans and their role as evidence for the biblical flood through to the formulation of the synthetic theory of evolution after the First World War. The

Bookmark File PDF Vertebrate Palaeontology

author shows how the pioneering work of Cuvier in the 19th century and the inspiration of Darwin and others led to modern theories of evolution. He goes on to look at the great palaeontological finds which resulted from the opening-up of the American West, the industrial exploitation of minerals in Europe and colonial expansion in Asia and Africa.

Arthur Smith Woodward was the Natural History Museum's longest-serving Keeper of Geology

Bookmark File PDF Vertebrate Palaeontology

and the world's leading expert on fossil fish. He was also an unwitting victim of the Piltdown fraud, which overshadowed his important scientific contributions. The aim of this book is to honour Smith Woodward's contributions to vertebrate palaeontology, discuss their relevance today and provide insights into the factors that made him such an eminent scientist. The last few years have seen a resurgence in fossil vertebrate (particularly fish) palaeontology, including new techniques for the 'virtual' study of fossils (synchrotron and micro CT-scanning) and new research foci, such as 'Evo-Devo' –

Bookmark File PDF Vertebrate Palaeontology

combining fossils with the development of living animals. This new research is built on a strong foundation, like that provided by Smith Woodward's work. This collection of papers, authored by some of the leading experts in their fields, covers the many facets of Smith Woodward's life, legacy and career. It will be a benchmark for studies on one of the leading vertebrate palaeontologists of his generation.

Presents an outline of the history of the vertebrates, based on studies by palaeontologists around the world.--

Bookmark File PDF Vertebrate Palaeontology

Discusses such areas as: vertebrate origins; how to study fossil vertebrates; early fishes; the early tetrapods and amphibians; the evolution of early amniotes; reptiles of the Triassic; the evolution of fishes after the Devonian; the age of dinosaurs; the birds; the mammals; human evolution.
